

SILBERBERG

New digital presence — proposal and phased roadmap

July 2026 · [silberberg.vercel.app](#)

SUMMARY

Silberberg is a boutique buyer of gold and silver in Koper. It currently has no online presence. Phase 1 — a premium bilingual website — is complete and live. This document summarizes what is already built, where the market opportunity lies, and the five-phase roadmap ahead.

01

The situation — today the customer can't find you

- Silberberg has no website, profiles, or directory listings.
- Anyone searching “gold buyer Koper” lands on a competitor.
- The decision to sell gold often starts with a phone in hand — mobile web is the first shop window.

02

Phase 1 (complete) — a live site, ready to present

What is built:

- Bilingual: Slovenian at the root, English at /en; Italian ready to switch on.
- Cinematic dark design with a live molten-gold animation (WebGL) and custom typography.
- Indicative price list by fineness, a four-step process, FAQ, and a contact form with GDPR consent.
- Mobile-first design: full-screen intro, hamburger menu, pinned action buttons.
- Accessibility with zero errors (WCAG 2.1 AA) and instant loading (static pages).
- Structured data (LocalBusiness + FAQ) already signaling to Google; a share image, sitemap, and robots are also in place.

The address, opening hours, phone, and company details on the site are placeholders for now — we'll complete them with your confirmed information.

03

Competition — where the opening is

- GOLD Store: agency-built site, daily prices, 5 languages, 11 branches — but corporate and impersonal, with no local story.
- Edisongold (Koper): an established local provider, but a dated static one-pager.

- Odkup-zlata.net: mail-in only — no local trust or personal contact.

The open space in the market: boutique personal trust and top-tier digital execution. That's exactly where Silberberg stands.

04

Local SEO — “gold buyer Koper”

- The domain silberberg.si is available (registration via the ARNES registrar).
- Hreflang, sitemap, and structured data are already active.
- Static pages load instantly — Google rewards this.
- Target keywords: gold buyer Koper, silver buying, gold valuation.

05

The roadmap ahead

The whole path in five phases — Phase 1 is complete; Phases 2–5 are built after approval, in sequential milestones.

Phase 1 · Digital foundation COMPLETE

The live bilingual website: design, content, price list, process, FAQ, form, and SEO baseline.

Phase 2 · Launch and local visibility

Register the silberberg.si domain, add your confirmed details, set up a Google Business Profile, and take the site public with local SEO for “gold buyer Koper.”

Phase 3 · Price and inquiry management

An admin area: update prices yourself (visible instantly) and an organized inbox for all inquiries and valuation bookings — no email.

Phase 4 · Purchase ledger and compliance

A purchase ledger designed for legal requirements: customer identification, audit trail, and staff roles (who sees reports, who only enters data).

Phase 5 · Reports, backups and optimization

Daily and monthly reports for accounting, automatic verifiable backups, and ongoing speed and SEO optimization.

06

Next step

- Phase 1: complete — the live site awaits only your details.
- Phases 2–5: after approval, built by milestones, in order.
- Investment: to be discussed at a meeting.
